

# *eunix: echo*

Eric Bailey

October 31, 2017<sup>1</sup>

<sup>1</sup> Last updated October 31, 2017

A reimplementaion of UNIX's echo for my own edification.

Include the core input and output functions from the C standard library.

1a 

```
< * 1a>≡  
#include <stdio.h>
```

This definition is continued in chunk 1.  
Root chunk (not used in this document).

Declare the **usage** function.

1b 

```
< * 1a>+≡  
void usage();
```

Uses usage 1d.

The **main** function.

1c 

```
< * 1a>+≡  
int main(int argc, char **argv)  
{  
    usage();  
    return 0;  
}
```

Defines:

main, never used.

Uses usage 1d.

Fix this, obviously...

1d 

```
< * 1a>+≡  
void usage()  
{  
    printf("\n"  
           "    echo - display a line of text"  
           "\n");  
}
```

Defines:

usage, used in chunk 1.

Flesh this out.

## Chunks

$\langle^* 1a\rangle$  [1a](#), [1b](#), [1c](#), [1d](#)

## Index

main: [1c](#)

usage: [1b](#), [1c](#), [1d](#)

*To-Do*

 Fix this, obviously... . . . . .	1
 Flesh this out. . . . .	1
